Dear Colleagues,

In the ever-evolving landscape of medical research, unique perspectives and scholarly acumen have the potential to shape the future of neurosurgery and precision oncology. Your contribution to this transformative initiative can break new ground and bring forth innovative approaches to patient care.

Participating in research endeavours not only provides a platform for your work to be recognised and published but also fosters collaboration and networking with like-minded scholars. Engaging in intellectual discourse and potentially forming collaborative partnerships with leading experts in these fields could mark a pivotal chapter on your academic journey.

We eagerly await the submission of original research articles, reviews, and case studies that align with contemporary scientific standards.

Your involvement in this scholarly pursuit not only contributes to your professional growth, but also collectively propels the progress of neurosurgery and precision oncology on a global scale.

As Mahatma Gandhi wisely stated, "Be the change that you wish to see in the world." I look forward to anticipating the transformative impact our collective academic pursuits will have on the advancement of these critical fields.

**Kind Regards,
Nazar Vasyliv**
